Project Team	Elena Muñoz, Diego Redolar, Eulàlia Hernández and Marc de San Pedro.
Duration of the project	Start: September 2008. Ending: September 2009.
Summary	<p>The implantation of technology in the sanitary and helping practice has emerged as a commitment to present and future by the different agents and stratum of the sanitary system. At the same time, there are various experiences that have attempted to implement centralized platforms with the clear aim of improving the consistency and continuity of care process of health services and social servants. And, with the desire to assess the implementation of these initiatives, have been launched in lines and research projects to provide data for improving processes. In this line, the project <i>Salut en Xarxa</i> is a proposal of analysis of the impact in the citizen of the pilot proof of access to the sanitary data implemented recently in the corporation of Sabadell's Parc Taulí. This is a project designed to assess the usability of the tool, the understanding of information accessed, and how this influences the use of the health</p>

	system and in managing their own health, by the own citizens.
Keywords	Access to sanitary data, virtual platforms, medical records, communication patient-doctor, health management.
